

The Resource

Windows 2000™, Multi-Tasking Operator Application

The Resource operator application is unprecedented in workstation efficiency for today's communications center. True Object Oriented design allows users to centralize the resources of frequently used functions (e.g., Radio, Paging, Auxiliary, and Telephone), and arrange them suitably on one dispatch screen for convenient access.

The Resource was specially engineered to reduce visual fatigue in a 24/7 dispatch environment. Whether your industry is Public Safety, Government, Military, 911, Transportation, Utility, Transit, or Air Traffic, our multi-tasking software is perfect for your site.

Resource List

Displays a summary of all resources resident in the *TDM Series* system and is present on-screen at all times for quick access.

Full User Customization

Customize every screen element including, modules, buttons, backgrounds, titles, categories and sizes. Create unique screen configurations for each dispatcher or by shift.

Integrated Recall Recorder

Integrated controls allow the user to replay, save, forward and rewind telephone or radio calls on screen.

Multi-Station Intercom

Manage 2-wire and 3-wire building intercom systems at the operator position.

Voter Display

Supports Voter site names and status, including Force Vote, Site Select and Voter Disable functions.

Auxiliary Alarms and Controls

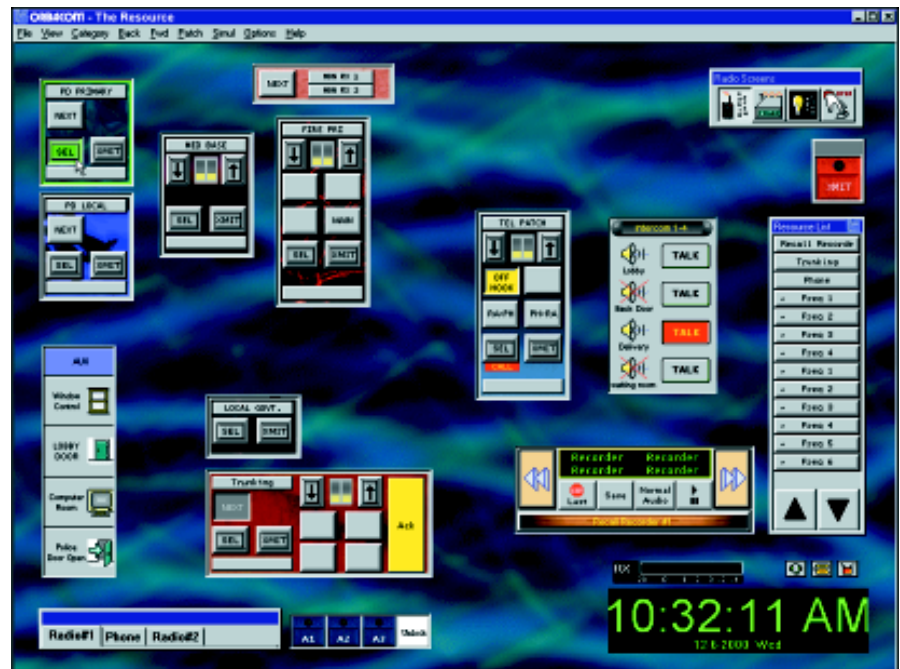

Control auxiliary operations, such as lights, doors, alarms, sirens and pumps, with the click of a mouse button.

On-Screen Help

Tap on our comprehensive, easy-to-use Help for guidance.

Security

Prevents unauthorized access, file deletion and application closing with Supervisor permissions and settings.
